OBSERVATION INFORMATION

Species	Date (s) Observed	Spawning	Rearing	Migration	Anadromous
Coho Juveniles	August 1, 2000		10		Yes

IMPORTANT: Provide all supporting documentation that this water body is important for the spawning, rearing or migration of anadromous fish, including: number of fish and life stages observed; sampling methods, sampling duration and area sampled; copies of field notes; etc. Attach a copy of a map showing location of mouth and observed upper extent of each species, as well as any other information such as: specific stream reaches observed as spawning or rearing habitat; locations, types, and heights of any barriers; etc.

Comments: On August 1, 2000, stream 103-40-10170, located at T.76S., R.82E., Section 22, was inspected using an electro fish in order to determine the upper extent of anadromous fish habitat. It was determined, based on the finding of juvenile coho salmon, that the cataloged portion of stream 103-40-10170 should be extended by 350 meters. The location of the stream was also confirmed and needs to be changed from the existing catalog location (see map).

Action: Add 350 meters to the cataloged portion of stream 103-40-10170 and adjust the location of the stream on the existing catalog.

Name of Observers (please Print) Mark J. Minnillo
